

NESTABLE AIRLINE TUB

These nestable airline tubs (also known as baggage handling tubs) are used by major airlines. Polyethylene construction makes these tubs durable and maintenance-free, but still lightweight and easy to transport.

These tubs are designed for maximum usability on belts and smooth surfaces. Rounded corners prevents snags while interior grooves help keep things in place. Optional cut-aways on the ends help accomodate bulky items like golf clubs, and optional holes in the bottom help precipitation drain.
