

SHORT STACKING TUB

You might expect these short tubs to nest to save space when they are empty. And you might expect them to stack when lidded. But what about stacking open tubs? No problem, this unique design allows you to stack open tubs when you rotate them 90 degrees.

Polyethylene construction makes these tubs durable and maintenance-free, but still lightweight and easy to transport. They have applications in manufacturing, logistics, retail, school and other environments that need a flexible storage solution.

Empty tubs nest so you can store more in less space.
